

## The perfect non-permanent window film solution.

### BE COMFORTABLE DAY & NIGHT

Solar Blinds will dramatically reduce heat, glare and UV rays making your space more comfortable. They can be rolled up allowing for extra sunlight to come through at the end of the day or for enhanced night-time views.

### ENJOY THE BENEFITS OF PRIVACY

Solar Blinds offer the privacy that bare windows don't and offer a more stylish approach to bulky curtains. Allowing for natural light to come through you'll be able to enjoy the view at all times or see out for security.

### PRINTED DESIGNS FOR ADVERTISING

We're able to UV print directly on to your blinds, so there's no reason for your customers to think you've closed. You can use them as business signage, product branding or to feature imagery.

### PROTECT YOUR FURNITURE

Reducing the amount of UV rays that penetrate through your windows, Solar Blinds will protect your furniture and floorings from premature aging.

### FLEXIBLE SOLAR CONTROL

Solar Blinds are available in a wide range of films to cater to your needs. Blend with your view, décor or fulfill your specific sun control needs, Solar Blinds give you a wealth of choice.

### MANUAL, AUTOMATIC OR MOTORISED

Control your blinds any way you like. For easy to access areas, choose blinds with a chain to instantly block heat and glare. You can even control your blinds through your mobile phone and program them to roll up and down at preferred times or by sensors that activate when the sun hits them.

### SOLAR BLINDS ARE PERFECT FOR:

- » Sun-affected restaurant tables
- » Offices where heat and glare are issues
- » Petrol service stations for outside visibility & merchandise sun protection
- » Lounge rooms to keep sun off the TV & reduce glare in afternoons

# Film colours & benefits

## **SUPER BRONZE/SILVER, SUPER GREY/SILVER**

Maximum heat and glare blocked. Used mostly in west-facing windows and skylights. 3% visible light transmission.

## **BRONZE/SILVER, GREY/SILVER**

Excellent solar energy (heat) blocker. Allows in twice as much light as the 3% films. Used mostly in west facing windows and skylights.

## **DARK BLUE**

High glare reduction. Darkest colour in range. Highly scratch resistant

## **BRONZE**

Enhances garden or bushland views. Compliments natural timber finishes. Used mostly in north and east facing windows

## **GREY**

Enhances sky and water views. Compliments white and chrome finishes. Used mostly in north and east facing windows

## **SILVER**

Aesthetically pleasing silver colour. Excellent visibility to enjoy views. High glare reduction. Improved energy efficiency technology.

## **EMBOSSSED BRONZE, EMBOSSSED GREY**

Good heat rejector. Blocks up to 99% of damaging UV rays. Helps reduce the fading of furnishings. Ideal for max privacy.

## **BLUE**

Good glare reduction. Scratch resistant technology. Maximum durability. Great for homes and offices.

## **LIGHT GREY**

Lighter colour for greater visibility. Rejects solar energy. Blocks UV rays.

## **CLEAR**

Blocks 99% of damaging UV rays. Offers clear views with solar protection. Commonly used in retail outlets and store fronts.
